1. In DEQM will only use terms "measurement period" and "submission period" when describing the FHIR transactions

| Measurement Period	specified in the Measure
Submission Period	defined as the period of time in which you can submit data. E.g., Data exchange and/or reporting.
Reporting Period	defined by the reporting program to tell you what period of time you must report for

2. Update Glossary - (pre-applied here: ~/output/index.html#glossary):

Measurement period: The period of time defined by the measure for which a measure will be calculated. (In FHIR is represented by the element *Measure.effectivePeriod*)

Reporting Period: The period of time defined by the reporting program for a set of data to be submitted. This term is not used in this implementation guide to avoid confusion with program specific definitions.

Submission Period: For this Implementation guide, submission period is the period of time in which data can exchanged when describing the FHIR transactions for data exchange, and measure reporting. The submission period typically overlaps with the measurement period and reporting period.

.

3. Update the guide to use only use terms "measurement period" and "submission period" when describing the FHIR transactions consistent with these definitions.
